

Cross-Scenario Impact Analysis

Common Patterns Across All Users

1. Time Savings: All users reduced research time from weeks to minutes
2. Cross-Domain Discovery: Each user found unexpected connections between pain points
3. Quality Assurance: Pre-validated pain points led to higher-confidence decisions
4. Strategic Pivots: Insights led to more focused, differentiated approaches
5. Market Validation: Quantified pain intensity and user count provided business justification

Unique Value Delivered

- Sarah (Solo Entrepreneur): Avoided building the wrong product
- Mark (Product Manager): Identified adjacent market opportunities
- Anna (Consultant): Repositioned services for higher-value engagements
- Alex (Innovation Lead): Discovered white-space opportunities at domain intersections
- Kim (Accelerator): Guided portfolio companies to stronger product-market fit

System Features Validated:

"Pain-First Approach: All users found genuine frustrations, not surface complaints
Semantic Search: Cross-domain connections revealed non-obvious opportunities
Quality Filtering: Pre-validated discussions saved manual review time
AI Analysis: Generated actionable insights from validated pain patterns
Quantified Validation: Pain intensity scores and user counts supported business decisions
